Reputation-Aware Growth Intelligence System (Narrative Risk Engine)

DATA SOURCES

YouTube
videos + comments

Reddit
posts + discussions

HackerNews
threads

Multi-platform public discourse data

→

DATA COLLECTION

Scrapers
yt-dlp, Reddit API, HN Algolia

Rate limit handling
+ retry logic

Data cleaning
+ deduplication

Unified dataset
CSV / JSON

Automated ingestion (daily pipeline)

→

PROCESSING & ANALYSIS

A. Feature Extraction
- Engagement score (likes + comments + upvotes)
- Text preprocessing

B. NLP Analysis
- Sentiment analysis (TextBlob)
- Topic / narrative tagging

Narrative themes:
workflow_agent, dev_tooling, pricing_ops, comparison, trust

C. Time-Series + Spike Detection
- Aggregate by day
- Detect spikes (robust z-score)

Automated discourse analysis

→

🔥 NARRATIVE RISK ENGINE

Risk Scoring Logic:
- **High Risk** = high engagement + negative sentiment
- **Medium** = spike + neutral sentiment
- **Low** = positive engagement

Decision Engine:
- IF negative spike → **Crisis Response**
- IF positive spike → **Amplify**
- IF neutral → **Monitor**

⚠ *"Attention spikes (launches or scandals) create narrative instability and sentiment volatility"*

→

OUTPUT & ACTION

A. Intelligence Outputs
- Sentiment over time chart
- Engagement by platform (YouTube highest)
- Engagement by content type (video + discussion)
- Narrative distribution
- Spike alerts

B. Growth / Crisis Actions

YouTube: creator collabs + dev content

Reddit: benchmark posts, code discussions

X: narrative injection / memes

Crisis response:
→ transparency messaging
→ feature/value drop
→ narrative shift to trust

→

HUMAN-IN-THE-LOOP

Human Decision Layer
- Founder messaging
- Policy communication
- Crisis handling
- Narrative positioning

✓ **Automated:** scraping, sentiment, topic tagging, spike detection, risk scoring

👤 **Human-reviewed:** final messaging, crisis response, brand positioning

"High engagement comes from developer workflows, not trust"

"Trust content gets low engagement → companies ignore it"

"Ragebait drives attention but destroys long-term trust"

"Unmanaged attention → reputation crisis"

🔁 Claude Growth Loop (Narrative Propagation System)

Trigger
release / scandal

→

⚡ System intercepts

Creator Content
YouTube, posts

→

⚡ System intercepts

Community Debate
Reddit, HN

→

Replication
memes, comparisons

→

Distribution
platform amplification

System detects and intervenes in growth loops

💥 Case: Higgsfield Failure

Problem: Ragebait marketing → high attention

Problem: No unified messaging → narrative chaos

Problem: No crisis response → backlash escalation

Result: Low trust → reputational damage

✓ System Fix:

- Unified communication policy
- Founder visibility
- Crisis response actions (compensation, features)
- Shift to trust-driven narrative

⚙️ OPS / AUTOMATION

Daily scheduled pipeline
Automated scraping runs every 24h

Retry on scrape failure
Exponential backoff for rate limits

Freshness check on discourse volume
Monitor data quality and completeness

⚠ **Alert when spike + negative sentiment detected**
Immediate notification to growth team
